Attorney Docket No.: MS1-1851US

Subject: Proposed Claim Amendments

8. **(Proposed Claim Amendment)** A system, comprising:

an inverse query engine configured to test an input against a collection of filters;

a cache associated with the inverse query engine, wherein the inverse query engine cache comprises a control module, an add filter module, a remove filter module, a matcher, a maintainer, an expire module, a trim module, a cache weight module, a cache weight, an optimal weight, a maximum weight, a filter table, a most recently used list, and an expiration list;

the filter table stored in the cache and containing multiple filters, wherein the new filter comprises a condition field, a data field, an expiration time field, a filter weight field, and a permanent flag field; and

a maintainer configured to maintain a size of the filter table within definite cache bounds, wherein the maintainer removes a filter based on an expiration time from the cache and trims the cache; wherein the trim module of the maintainer, upon the occurrence of the filter table reaching the maximum weight, determines the cache weight and identifies filters to be removed and removes filters from the filter table to obtain the optimal weight;

wherein the size of the filter table may be indicated by size of the filter or by weight of the filter.
